

The Greenhouse

4Eco are a Microgeneration Certification Scheme (MCS) (government approved) accredited company who specialise in the design and installation of Solar Thermal systems and Air Source/Ground Source Heat Pumps, for both domestic and commercial properties

They are based in the picturesque Wolds village of Binbrook in Lincolnshire.

On 22nd and 23rd June, they will be holding an event within the Lincolnshire Show named 'The Greenhouse' which will exist to provide first class information about a wide range of renewable technologies to visitors of the show.

'The Greenhouse' is the brainchild of 4Eco marketing director, Jo Huggett, and her team. As the Sustainable Living Exhibition was no longer possible at the Lincolnshire Show, Jo felt the need to create an event within the event to both provide professional information and dispel myths associated with renewable technologies, and to situate this all under one roof. The event has generated a huge amount of interest from local companies aiming to get the message across about how their systems can benefit home and business owners alike.

'The Greenhouse' will be ideally situated across stand numbers 7 – 54, Row C, between 7th and 8th Avenue at the Lincolnshire Showground, and will consist of a 12 x 12m Chinese Hat style marquee, which will house eleven different companies in total. We are aiming to cover a range of technologies and ensure that there are no two companies who specialise in the same type. All of the companies are based in Lincolnshire or the surrounding area and they are all experts in their field.

Visitors will have the opportunity to ask questions and gain impartial advice, whilst also enjoying the complimentary refreshments provided.

The event is being supported by the Lincolnshire Show Committee, Anglian Water are having a presence within the marquee.

The other companies joining us consist of:

- Freewatt (specialising in the design and installation of Solar Photovoltaics)
- Sitec Infrastructure Services Ltd (specialising in wind turbines)
- JH Walter (property and business consultancy)
- Site Investigation Services (specialising in drilling for Water Wells and Ground Source Heat Pumps)
- Freerain, part of the Gusto Group (specialising in rainwater harvesting systems)
- Earlswood Services Ltd (specialising in biomass heating)
- Ryland Design Services Ltd (an Architectural Practice with experience of renewable energy projects)
- Go Geothermal Ltd (geothermal equipment supplier)
- Renewables Network (a renewable energy business network)
- In addition to those taking part, we have been kindly sponsored by m-media, Kingspan and Ideal.
- We will also be situated between Grange Reproductions, who specialise in stoves and fireplaces and Bore-it (drilling specialists)

Our hope is to create an informative event, involving only companies that we trust and judge to offer a high quality of service. We will have various different types of technology on display, and technical advisors will be on hand to explain how each their systems work.
